

Krystal

Architectural glass castings

Beautiful and unique glass for your project

Krystal Bali is a glass casting studio in eastern Bali. We believe it is the finest art glass casting studio in Indonesia. Krystal is casting in high optical crystal glass to formulate pieces that play with light and form and dramatically enhance any room. Drab or dark rooms can be quickly transformed into light and vibrant spaces. Elegant rooms can be catapulted into outstanding architecture through these glass inclusions in the walls. Use outward facing walls to light Krystal with natural light. Employ interior lighting to fire the glass in bathroom, hallways or kitchen.

Krystal is casting a broad array of windows and lights for home, hallways, backbars, entry ways and larger projects in the built environment.

This catalogue shows many of the designs which you can draw on for your project. Note that part or all of any one design can be utilized. Alternately a combination of design parts can be pulled from different master plates to create completely custom designs. For example, drawing a feature from one master plate and geometric elements from another to create both the story and the size of window of light that you desire.

Glass castings are normally 2 cm thick and can be cast in both bas relief and negative relief (raised detail and sub-surface detail).

For your convenience we divided this catalogue into three categories:

1. Patterns and geometrics
2. Nature in glass and light
3. Temple and sacred spaces
